
48 KEGG orthologs · 92 KO–class links · 17 KEGG classes
bar height = summed relative abundance of the 48 KOs
link width = KEGG pathways per KO · class arc = number of KOs

Drug resistance: antimicrobial
Infectious disease: bacterial
Aging
Cellular community - prokaryotes
Cell growth and death
Signal transduction
Membrane transport
Folding, sorting and degradation
Replication and repair
Translation
Lipid metabolism
Xenobiotics biodegradation
Amino acid metabolism
Metabolism of other amino acids
Carbohydrate metabolism
Energy metabolism
Nucleotide metabolism
LA1 control
LB1 manure
LC1 straw
